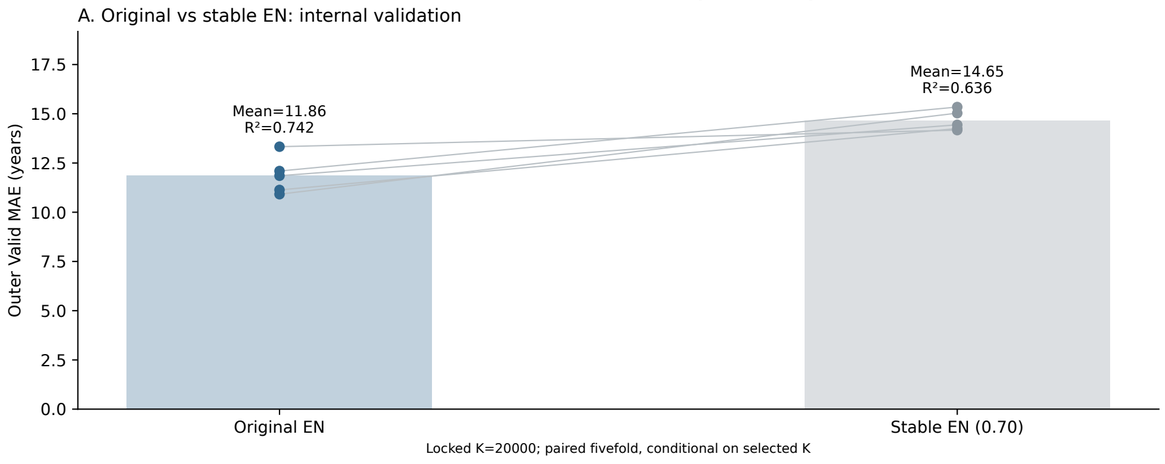
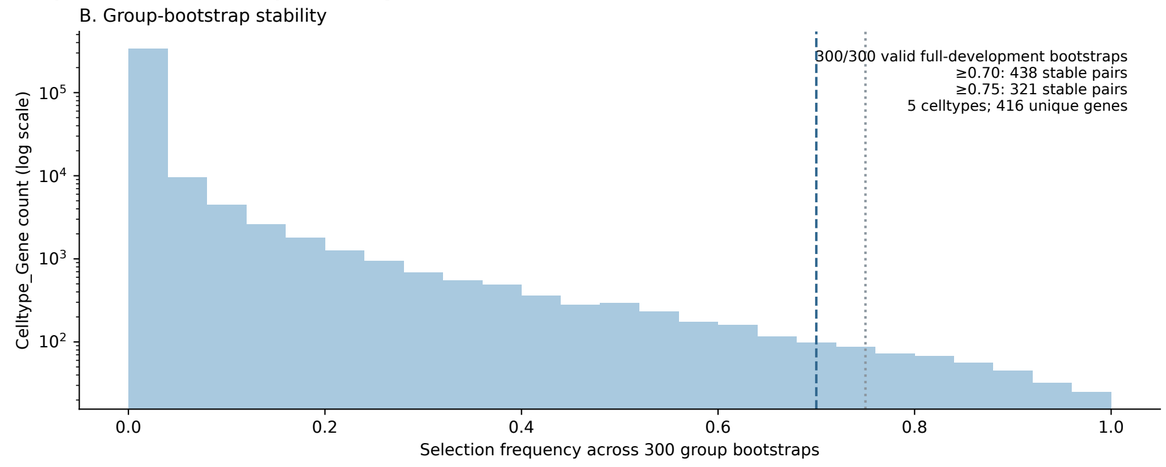
Fibro: Final ElasticNet chronological aging clock
Full-development predictive clock; stable-feature interpretation is separately identified

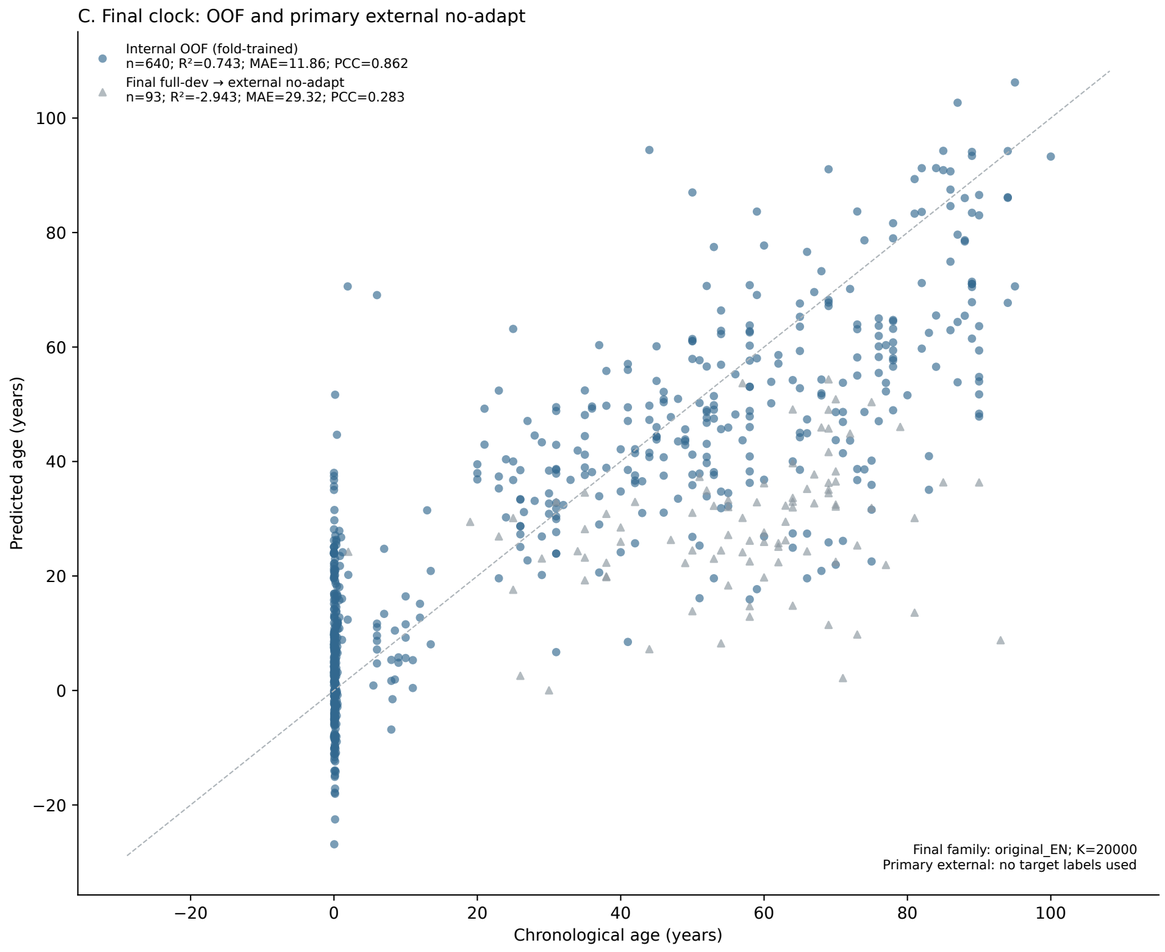
A. Original vs stable EN: internal validation



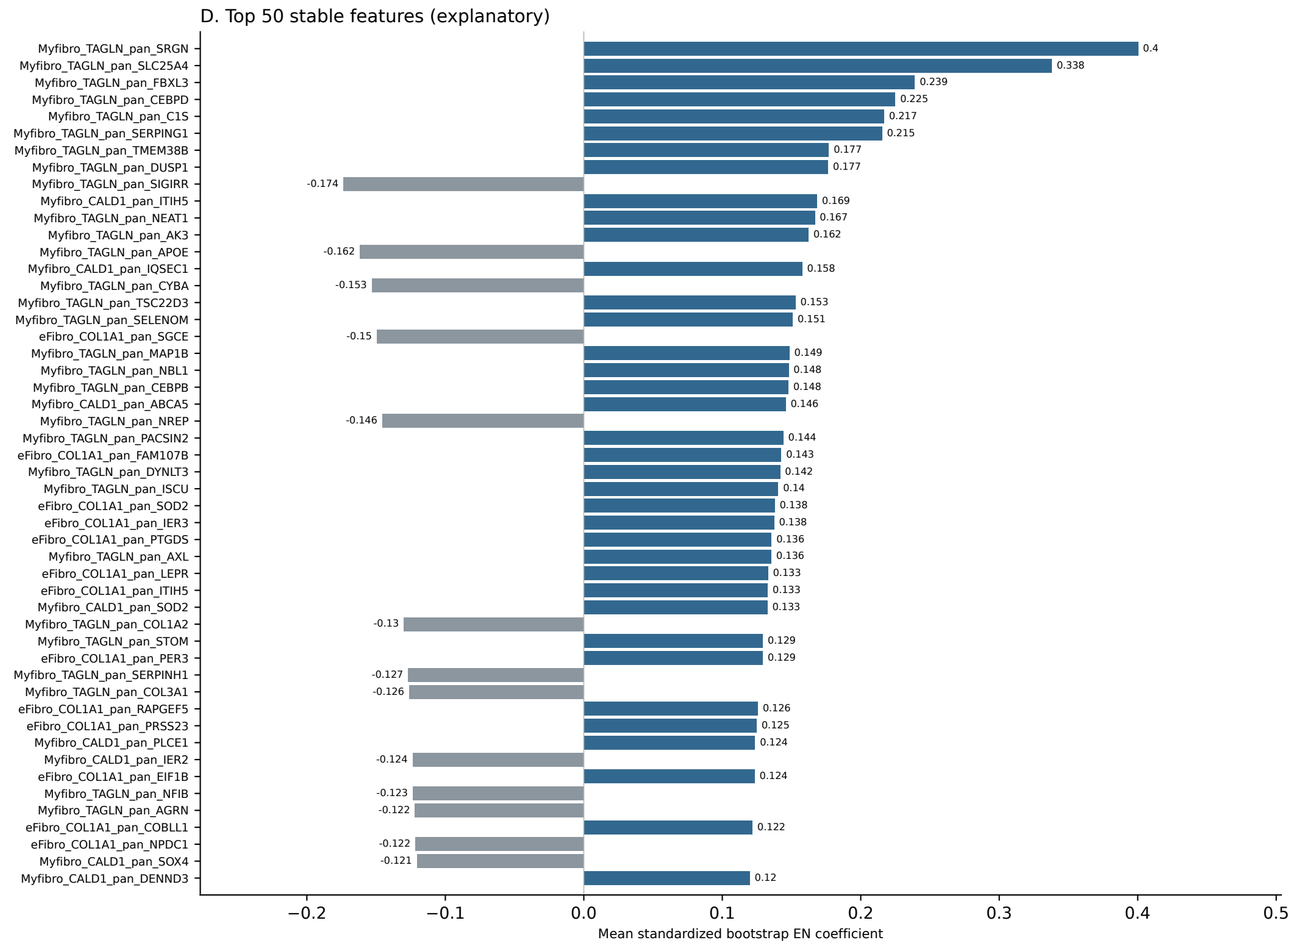
B. Group-bootstrap stability



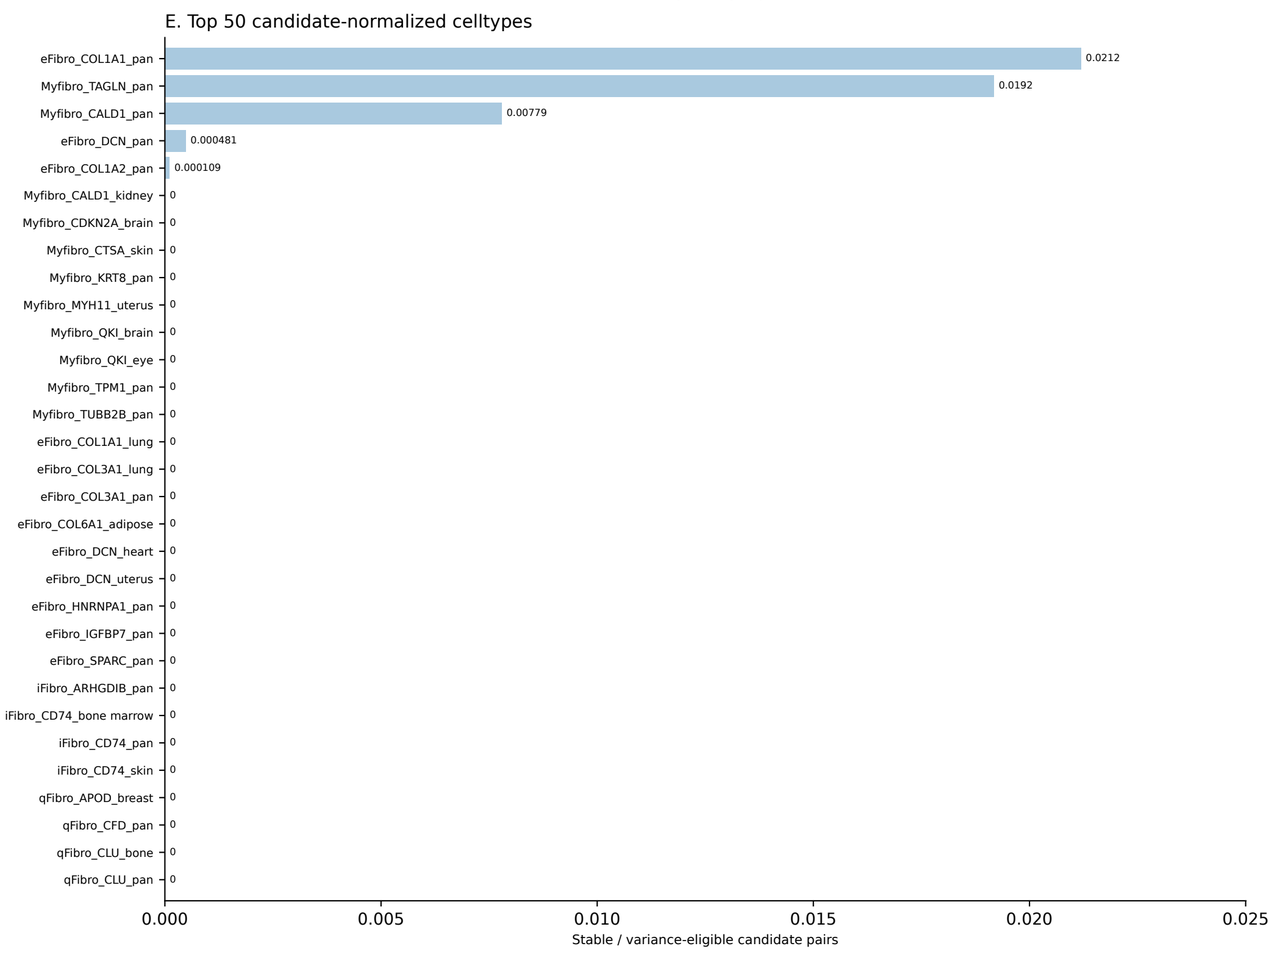
C. Final clock: OOF and primary external no-adapt



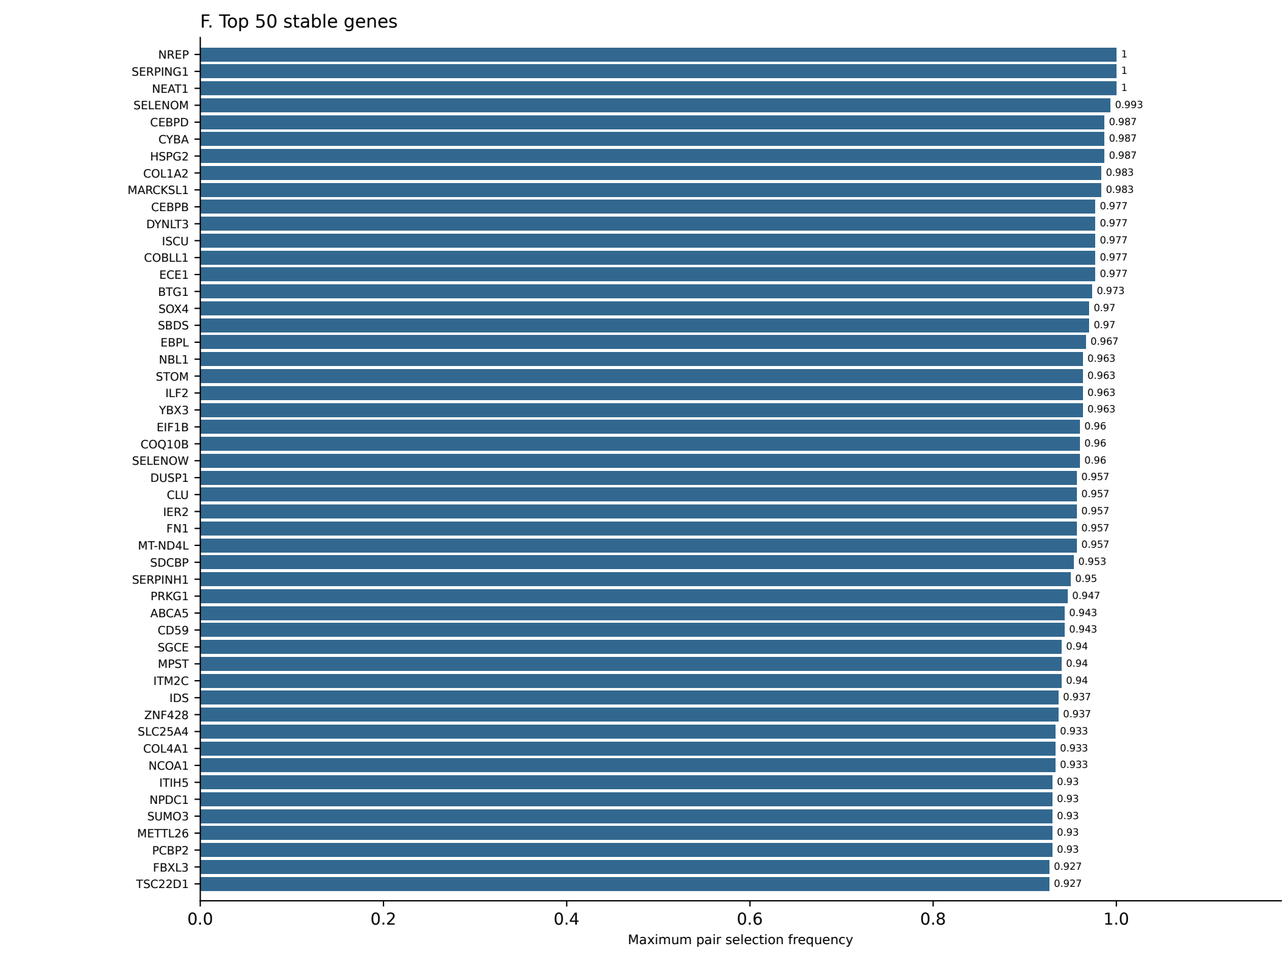
D. Top 50 stable features (explanatory)



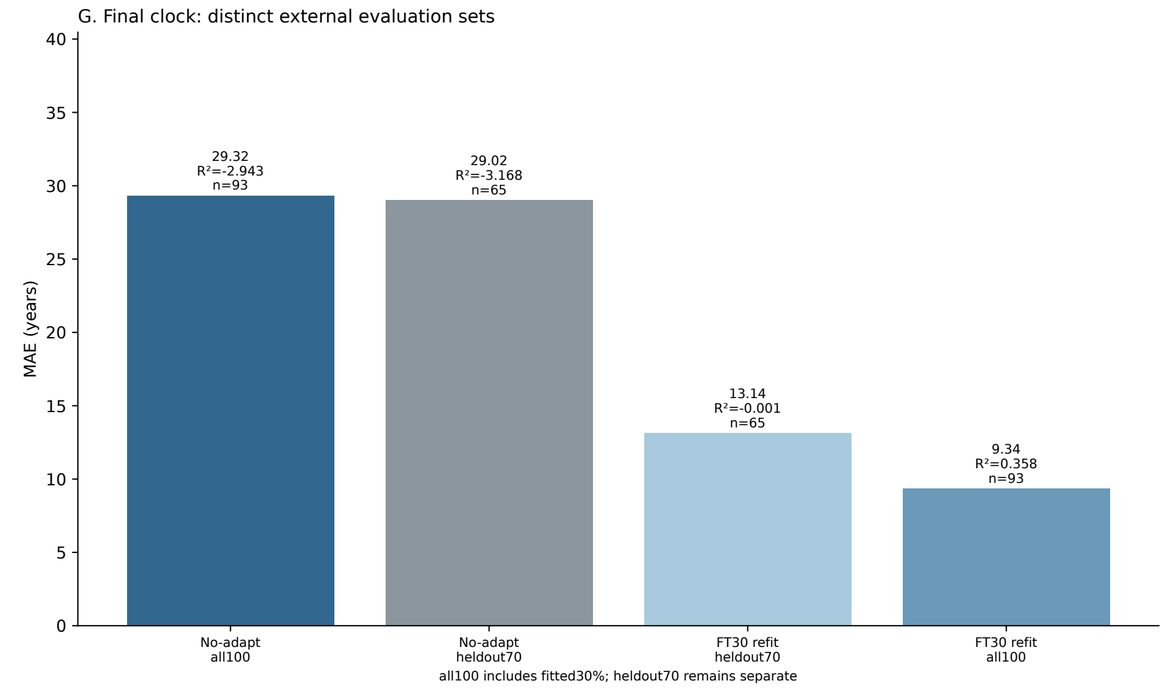
E. Top 50 candidate-normalized celltypes



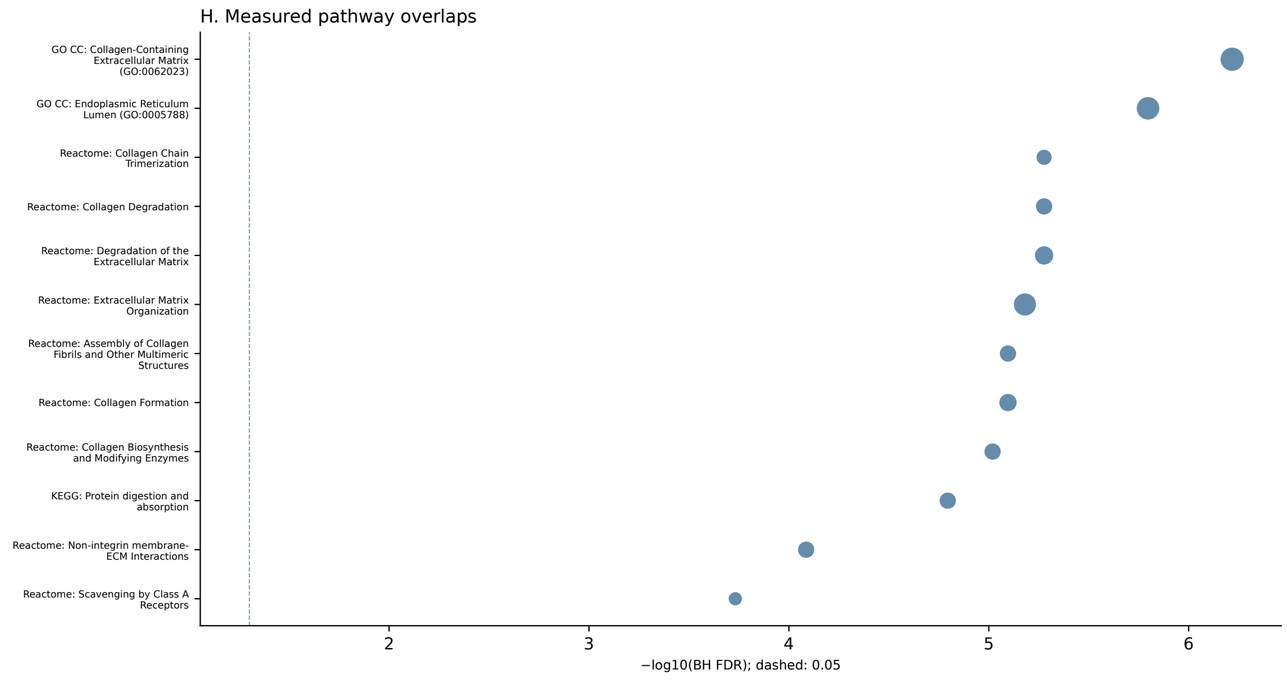
F. Top 50 stable genes



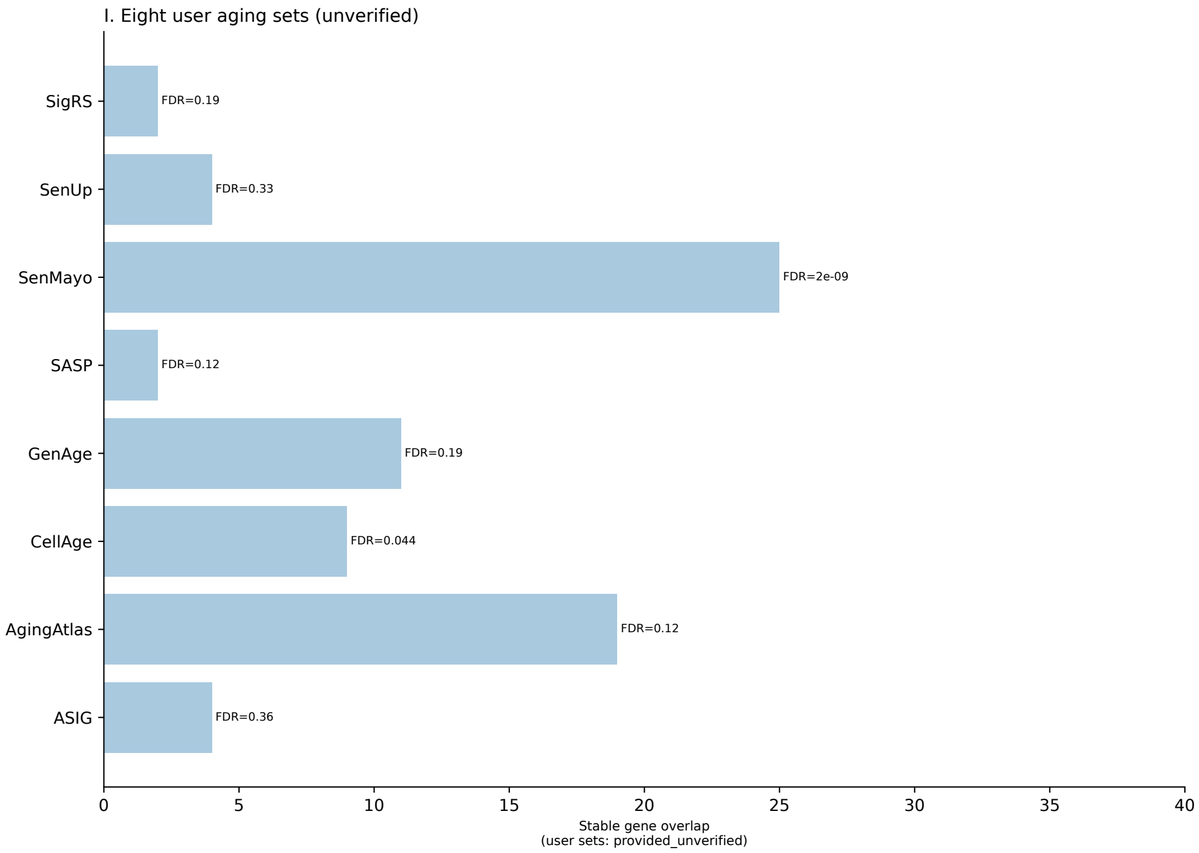
G. Final clock: distinct external evaluation sets

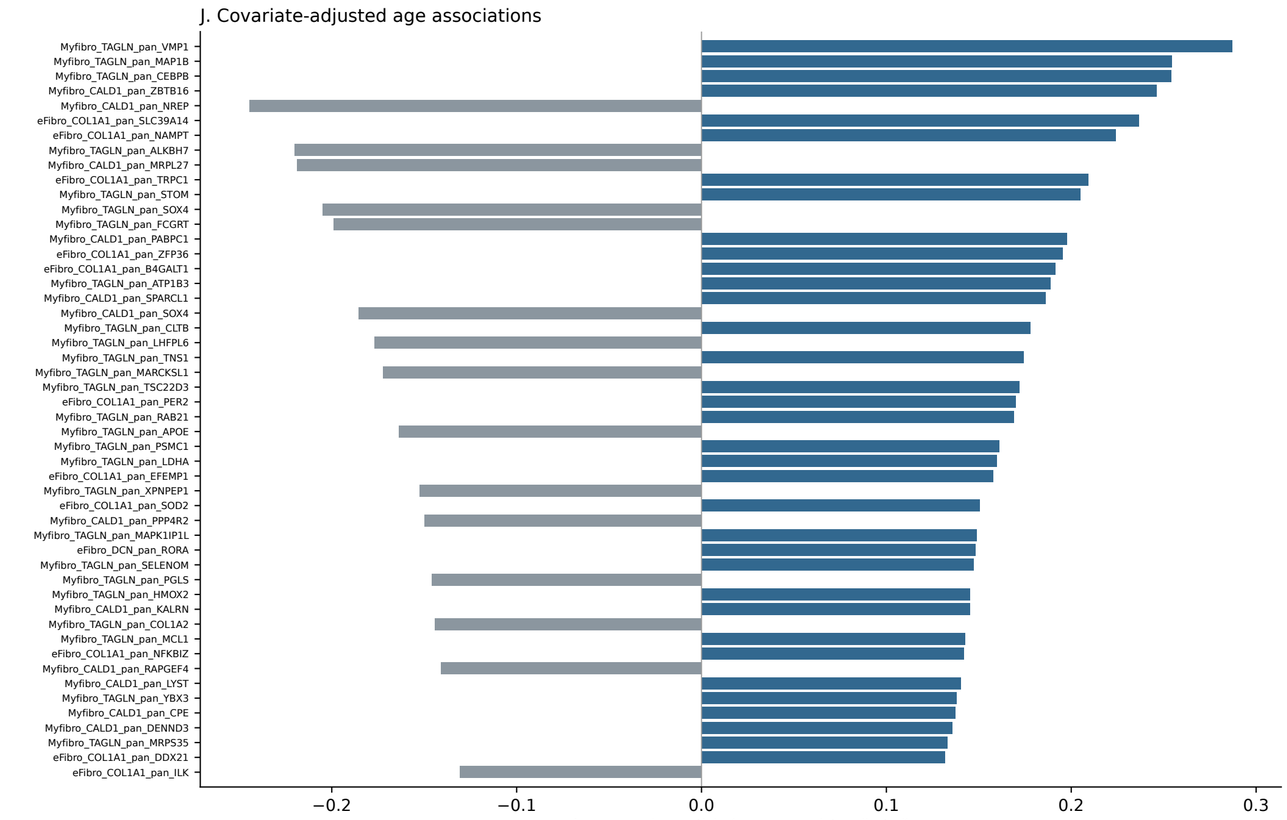


H. Measured pathway overlaps



I. Eight user aging sets (unverified)





J. Covariate-adjusted age associations
